

Like this wildflower that smells so sweet,
It has tasty nectar which makes a nice treat;
For the yellow and black insect called a honey bee,
Whose hive is over there in that big old tree.

by Nancy Marx

And on the way we'll use our senses as we look around.
To discover nature's wild things, some that don't make a sound.

3. Come look over here what I found in the sand,
It sure does look like a person's little hand;
It belongs to a mammal that has a masked face,
It's called a raccoon; they're found all over the place.

So that maybe you'll eat something else on the menu.

Insect a Buckeye Butterfly
Butterfly with flowers like
stars, shiny, and
brings you to nature.
Caterpillar a Buckeye larva

6. Well here's an unusual bump on a log.
Oops, got too close, it jumped. It's a frog.
There must be water nearby, oh yes here's a brook.
I let's go over there and take a closer look.

8. Now that our walk to the sea is through,
I had fun using our senses and hope you did too;
There's so much to discover like the cries of the loon,
Let's all come back and do this again soon.

Bird = Common Loon
• Loons nest on fresh water
lakes in the North during
the Spring, in the Winter,
they migrate to the ocean
lake coasted areas.
